

Password-Free Single Sign-On

Enabling users to access multiple applications through a single login step with one password is a great way of reducing IT costs and user frustrations. But with this pro comes a con: if the main password is hacked, the linked systems are open to attack. The solution? No password at all.

Removing the single point of failure

As single sign-on (SSO) creates a single point of failure, most SSO solutions employ strong password protocols to stop that single point from being breached. At idenprotect, we simply remove the single point altogether. Our SSO solution uses a password-free multi-factor authenticator (MFA) that strengthens your security by decentralising it. There's no one way in for hackers, which means the economics of a cyber-attack are staunchly in your favour.

LESS HASSLE

Reduces the number of passwords a user has to manage to zero

THE SAFER OPTION

Safer than SSO solutions that use passwords and pre-shared keys

EASY TO INTEGRATE

Fits in well with existing systems in look, feel and function

What do you get with idenprotect's Secure SSO?

Improved usability

Users get instant access to corporate apps without having to input, remember or manage any passwords, saving time for users and IT teams.

Desktop to the web capability

idenprotect's SSO integrates with idenprotect's windows desktop solution so that users log in to their machines without a password, and don't have to log in again.

Improved security

In conjunction with idenprotect's MFA, passwords and pre-shared keys are replaced with private keys stored in the secure hardware in mobile phones, beyond the reach of hackers or malware.

Alternative authentication support

idenprotect supports other authentication methods such as hardware tokens, digital certificates, one-time passcodes (OTP) and QR code scanning.

Legacy systems modernisation

Using idenprotect's access gateway, idenprotect offers password-free SSO to legacy applications without any alterations of the apps themselves.

Customisability

idenprotect's SSO dashboard comes with a range of customisation options, enabling you to match it to your organisation's branding.

Already using other SSO systems?

If you're already using other SSO systems, idenprotect's MFA solution offers enhanced protection and usability of those systems. Our MFA can integrate with Microsoft ADFS, Okta, Ping Identity and many others to extend password-free access across your network and eradicate numerous complexities. However, if you want to realise your return on investment (ROI) quicker, a combined idenprotect MFA and SSO solution could be your best choice.

About idenprotect

idenprotect is the first all-in-one password-free authentication, single sign-on and identity platform for organisations. Leading organisations use idenprotect to improve security, meet regulatory mandates and reduce complexity and costs. It eliminates the hacker's #1 target—the password—to protect against fraud, phishing and credential theft. It makes employee access and customer payments and transactions more secure. It can be deployed quickly and promises a much better user experience.

Technical Specifications

For easy deployment and a seamless and consistent user experience across the enterprise, idenprotect integrates with the leading virtual private networks (VPNs), security gateways and cloud apps. These include Office 365, Windows Desktop, Oracle Cloud, Citrix, VMware, Active Directory and Blackberry Dynamics.

Supported Platforms

iOS 10 or later, Android 6.0 or later, Windows 10

Integration Methods

SAML 2.0, RADIUS, Certificate-Based Authentication, Forms-Based Authentication, Time-Based OTP, Message-Based OTP (SMS)

OTP Security Algorithms

HMAC-SHA256

SDK Availability

iOS, Android and Windows

Deployment Options

On premises, cloud or as a hybrid

The future is password-free

We'd love to show you how idenprotect can give your organisation the security and simplicity it needs.
