

Password-Free Windows Access

For your new business perimeter to be as strong and efficient as possible, you don't just want your applications to be password-free. You want your computers to be too. With idenprotect, you can turn all Windows device logins into smooth and seamless password-free experiences, making costs drop and productivity soar.

Making your computers as secure as your applications

Compromised passwords are the top cause of data breaches and forgotten passwords lead to costs, delays and lost productivity. Removing passwords from your application logins boosts efficiency and makes your software safer—but what about your computers? Most employees still use passwords to log in to their Windows machines after turning them on. idenprotect eliminates these as well, boosting efficiency further and making your Windows desktops and laptops as secure as your apps.

FASTER ACCESS TO COMPUTERS

Log in to Windows without a password

LOWER COSTS

Fewer passwords mean fewer costs

THE SAFER OPTION

Passwords are the least safe method of protection

What do you get with idenprotect's password-free Windows access?

	Windows
Password-free access	<input checked="" type="checkbox"/>
Secure offline access	<input checked="" type="checkbox"/>
Login screen looks and feels like operating system	<input checked="" type="checkbox"/>
Support for virtual desktop environments (VDI)	<input checked="" type="checkbox"/>
Alternative authentication methods offered	<input checked="" type="checkbox"/>
Public key cryptography-based security	<input checked="" type="checkbox"/>
Desktop to the web / single sign-on capabilities	<input checked="" type="checkbox"/>

All shared secrets eliminated on Windows machines

Users log in to their idenprotect-enabled Windows computers using the biometric authenticator on their mobile phone and a private key stored in their phone's secure chip. Unlike other solutions, this does not rely on shared secrets because the private key is truly private, making idenprotect safer.

About idenprotect

idenprotect is the first all-in-one password-free authentication, single sign-on and identity platform for organisations. Leading organisations use idenprotect to improve security, meet regulatory mandates and reduce complexity and costs. It eliminates the hacker's #1 target—the password—to protect against fraud, phishing and credential theft. It makes employee access and customer payments and transactions more secure. It can be deployed quickly and promises a much better user experience.

Technical Specifications

For Windows machines, idenprotect offers security based on public key cryptography, biometric inputs and the secure hardware on smart devices. Users log in password-free to Windows and enjoy desktop-to-the-web access with single sign-on. When a computer or phone is not connected to the internet, idenprotect enables a password-free login to Windows using a one-time passcode (OTP).

Supported Use Cases

- Windows 10 in offline and online mode
- Domain-joined and non-domain-joined Pc's
- Local login and remote desktop login

Integration Methods

Standard Windows API's (credential provider and keystore provider)

Deployment Options

- Available via Windows Installer (MSI)
- Deployable by group policy
- Requires idenprotect core server
- Core server can be deployed on-premises, in the cloud or as a hybrid

The future is password-free

We'd love to show you how idenprotect can give your organisation the security and simplicity it needs.
